

Brothers and Sisters

Below are pictures of cable grabs by three different manufacturers, some with different requirements for use. Please check all of your cable grabs to be sure that you are using the proper additional PFAS equipment such as lifelines, retractable lanyards, shock absorber lanyards or deceleration lanyards.

Some cable grabs must not be used with retractable lanyards, shock absorbers or deceleration lanyards and others allow their use. Check your Personal Fall Arrest System equipment!

Follow your employers Fall Protection policy, the manufacturers requirements and recommendations. Always follow the Fall Protection and Rescue Plan for the job and task you are performing.

If you find that components of your PFAS is incompatible with each other, notify your supervisor immediately **and do not use.** **Check your Personal Fall Arrest System equipment!**

Thanks to Local 32 Brother and Business Representative Eric Werlinger for bringing this issue to our attention.

Fraternally,

IUEC Safety Committee

It is the mission of the IUEC Safety Committee to improve the Elevator Constructor's sense of awareness to daily hazards present in the workplace.
